4. Tipus de jugador
5. Com mesurar l'impacte
6. Casos d'estudi

1. Introducció

Gamificar/Ludificar és utilitzar mecàniques de joc en contexts que NO són de joc.

“Use of behavioural psychology and game mechanics to influence desired behaviours or to enhance user experiences. ”

Zichermann G.

1. Introducció

Gamificar és un procés de disseny, per tant, necessita de metodologies i eines de suport.

La gamificació ha de combinar **motivació extrínseca i intrínseca**:

- Recompenses extrínseques, com ara les taules de classificació o les barres de progrés.
- Motivació intrínseca fent que les tasques es percebin com a significatives, agradables o personalment gratificants.

1. Introducció

Beneficis

- En educació: més participació, més motivació.
- En salut i benestar: adherència als tractaments i hàbits saludables.
- En productivitat i treball: seguiment d'objectius i reconeixement visible.
- Sostenibilitat: fomentar comportament sostenibles.
- Participació ciutadana: incentivar la participació en processos comunitaris.

1. Introducció

Riscos

- Manipulació o disseny persuasiu opac
- Addicció a recompenses
- Desmotivació per rànkings
- Pressió social o penalització pública
- Sobrecàrrega si es dissenya malament

3. Metodologies
4. Tipus de jugador
5. Com mesurar l'impacte
6. Casos d'estudi

2. Principis de disseny

Principis generals:

- Començar amb el problema, objectius, l'usuari, context, ...
- Integrar la gamificació en tasques clau, no com a capa decorativa.
- Utilitzar mecàniques adaptades a diferents tipus de jugadors.
- Iterar amb usuaris:
 - Prototips
 - Tests

2. Principis de disseny

Principis específics:

- Feedback immediat i visible.
- Progrés i sensació d'avanç.
- Equilibri entre repte i habilitat.
- Recompenses significatives.
- Autonomia i motivació intrínseca.
- Component social.
- Simplicitat i claredat de les regles.

3. Metodologies

Gamification model canvas (GMC) és una eina visual de disseny que permet planificar una estratègia de gamificació de manera estructurada, definint elements clau com:

- Revenues
- Players
- Aesthetics
- Dynamics
- Mechanics
- Components
- Plataforms
- Costs

GAMIFICATION MODEL CANVAS

Project name: _____

Design for: _____
Design by: _____

On: _____
Iteration: _____

PLATFORMS Describe the platforms on which to implement game mechanics. What platforms do we have available for incorporating mechanics? What platforms can we use to bring mechanics to the players? What platforms will the game run on?	MECHANICS Describe the rules of the game with components for creating game dynamics. How will we use the selected components to develop behaviors? How can we explain the mechanics to our players? How can we increase the difficulty of mechanics over time? Examples of mechanics: Watch this video and get 10 points Answer this survey and get expert level Complete this form and unlock this badge Buy something to complete this mission Read content before 10 minutes Recommend something and get this prize	DYNAMICS Describe the run-time behavior of the mechanics acting on the players over time. What dynamics will we use to create the aesthetics of our game? What dynamics work best for our players? How will these dynamics work in our game? Some dynamics: Appointment Follow Progression Reward Scarcity Identity Productivity Creativity Abandon	AESTHETICS Describe the desirable emotional responses evoked in the players, when they interact with the game. What elements will grab the attention of our players? Why should they play? How can our players have fun? Some aesthetics: Narrative Challenge Following Discovery Expression Fantasy Gamification Submission	PLAYERS Describe who and what the people are like in whom we want to develop behaviors. Who are our players? What are your players' day? What do our players want?
	COMPONENTS Describe the elements or characteristics of the game to create mechanics or to give feedback to the players. What components will we use to create our dynamics? What components will create game mechanics? What components will be used to provide feedback? Some components: Points Badges Achievements Leaderboards Levels Currency Dice Progress Bar Missions Avatars Virtual Goods Real Prizes Inventory Virtual Currency		BEHAVIORS Describe the behaviors or actions necessary to develop in our players in order to get return from the game. What behaviors do we need to improve the challenges of the game? What behaviors would our players like to improve? What behaviors can be improved? Examples of behaviors: Watch video Answer survey Complete form Buy something Read content Recommend something Go to a website Read email	
COSTS Describe the main costs or investment for the development of the game. What are the main costs of the game? What budget is available for achieving the challenges set? Can we phase costs over time, based on the achievement of objectives?		REVENUES Describe the economic or social return of the solution with the introduction of gamification. What economic or social challenges set out the game? How will we measure the success of the game? What results do we hope to achieve from the game?

3. Metodologies

Principals elements de GMC

Behaviours: describe the behaviours or actions necessary to develop in our players in order to get returns from the project. (e.g. Watch vídeo, answer survey)

Aesthetics: describe the desirable emotional responses evoked in the Player, when they interact with the game. (e.g. Narrative, challenge, fellowship, ...)

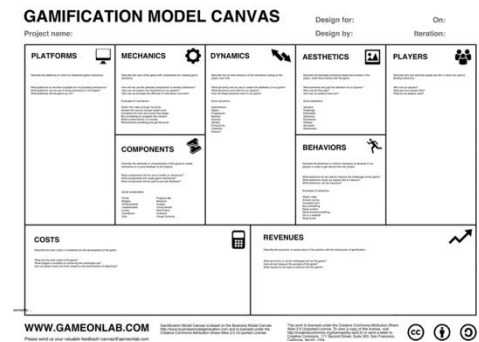

Dynamics: describe the run-time behaviour of the mechanics acting on the Player over time. What Dynamics will use to create the aesthetics of our game? (e.g. Appointment, status, progression, reward, ...)

Mechanics: describe the rules of the game with components for creating game Dynamics. How will use the selected components to develop behaviours? "watch this vídeo and get 10 points" "answer this survey and get expert level"...

Components: describe the elements or characteristics of the game to create mechanics or to give feedback to the players. E.g. Points, badges, levels, progress bar, avatar, virtual goods...

3. Metodologies

Altres metodologies:

- Octalysis
- MDA – Mechanics Dynamics Aesthetics
- Self-Determination Theory (motivació intrínseca)

5. Com mesurar l'impacte

Questionaris

- GAMEX (Gameful Experience Scale)
- Situational motivation scale
- User engagement scale

Altres mètriques (engagement):

- Usuaris actius (diarios, mensual)
- Freqüència i durada de sessions
- Tasques o reptes completats
- Progressió (nivells, punts, badges)
- Interacció social
- Satisfacció.
